Note: Human subjects policies are under NIH review and therefore subject to change. For more information, see Clinical Trial Requirements for Grants and Contracts. For guidance on using this document, see NIAID Clinical Terms of Award – Guidance for Compliance. Awardees must comply with the NIAID ...

NIAID Clinical Terms of Award | NIH: National Institute of

Albinism is a group of inherited disorders that results in little or no production of the pigment melanin, which determines the color of the skin, hair and eyes. Melanin also plays a role in the development of certain optical nerves, so all forms of albinism cause problems with the development and function of the eyes.

Albinism | Genetic and Rare Diseases Information Center

Chromosome 3p deletion is a chromosome abnormality that affects many different parts of the body. People with this condition are missing genetic material located on the short arm (p) of chromosome 3 in each cell. The severity of the condition and the associated signs and symptoms vary based on the size and location of the deletion and which genes are involved.

Chromosome 3p deletion | Genetic and Rare Diseases

The National Institute of Mental Health (NIMH) is the largest scientific organization in the world dedicated to research focused on the understanding, treatment, and prevention of mental disorders and the promotion of mental health.

NIMH » Home

NIDA leads the nation in bringing the power of science to bear on drug abuse and addiction through strategic support and conduct of research across a broad range of disciplines and rapid and effective dissemination and use of the results of that research to significantly improve prevention and treatment and to inform policy as it relates to drug abuse and addiction.

National Institute on Drug Abuse (NIDA) | National

SEER is an authoritative source for cancer statistics in the United States. The Surveillance, Epidemiology, and End Results (SEER) Program provides information on cancer statistics in an effort to reduce the cancer burden among the U.S. population.

Surveillance, Epidemiology, and End Results Program

Francis Sellers Collins (born April 14, 1950) is an American physician-geneticist who discovered the genes associated with a number of diseases and led the Human Genome Project. He is director of the National Institutes of Health (NIH) in Bethesda, Maryland, United States..
